DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-15, drawn to a light waveguide forming method, classified in class 438, subclass 31.
 - II. Claims 16-17, drawn to an electrolyte solution used in a process of forming a light waveguide, classified in class 205, subclass 281.
 - III. Claims 18-19, drawn to a light waveguide and its forming apparatus, classified in class 385, subclass 129.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Group 1 and Group 2 are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a different electrolyte solution can be used in the method for forming a light waveguide. The subcombination has separate utility such as its use as an electrolyte solution in a different process, not just the formation of light waveguides.

Inventions of Group 1 and Group 3 are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product

or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed in Group 3 can be made by another and materially different process, and does not require the process of making that utilizes the limitations and steps as recited in the claims of Group 1.

Inventions of Group 2 and Group 3 are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed in Group 3 can be made by another and materially different process, and does not require the process of making that utilizes the electrolyte solution as recited in the claims of Group 2.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and because the search required for Group 1 is not required for Group 2, the search required for Group 1 is not required for Group 3, and the search required for Group 2 is not required for Group 3, restriction for examination purposes as indicated is proper.

5. A telephone call was made to Robert Goodell on 25 February 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 2876

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
